

ABSTRACT

[0023] A system and method for merging streaming and stored content information in an electronic program guide. The method includes receiving a plurality of streaming content description data about a plurality of streaming content and receiving a plurality of stored content description data about a plurality of stored content. A program guide is then provided, including at least some of the streaming content description data and at least some of the stored content description data. A system implementing the method may comprise a coordinator to receive a plurality of streaming content description data about a plurality of streaming content and a content manager to provide to the coordinator a plurality of stored content description data about a plurality of stored content. The system and method may be implemented in a computing device having a processor and a machine readable medium.
